Technolink Of The Rockies Leverages the Power of the Cloud By Offering Customers Workspace as a Service

*Leading Unified Communications
Helps SMBs Take Advantage of
Emerging Technology*

Englewood, CO – July 26, 2016 - Technolink of the Rockies an industry leader in unified communications, announced today the release of their newest technology deployment, which is their WaaS (Workspace-as-a-service) program that is being offered to the SMBs (small to mid-sized businesses). The program is designed to help businesses make the proverbial jump to the cloud. As the number of executives increase, so does the demand for more flexible and secure applications, hardware, software and virtualized components. WaaS takes this a step further, by taking office technology to new heights by running every component through a virtualized network, instead of requiring local device management. Technolink of the Rockies is very excited to announce this program and to share the value-adds with their existing client base.

In layman's terms, WaaS virtualizes every component on a desktop computer. So instead of having a physical component such as servers on-site, which can become obsolete, security-breached or malfunctioning, all components are run through the cloud. For end

users, this means that every single component of an employee's workstation will be available to them, regardless of where they're located or which device they happen to have with them. Everything resides in the cloud including all software, data, file sharing capabilities, Microsoft programs, and line of business software.

"We're so excited to offer our WaaS program to SMBs," stated Jeff O'Neill, VP of Sales at Technolink of the Rockies. "The majority of businesses will be transitioning the bulk of their IT infrastructure to the cloud and our WaaS solution enables them to do it in a secure manner without compromising their need for flexible access to all of their software tools and programs. Most businesspeople don't have access to all of their technology at any point in time and WaaS eliminates this problem forever. Furthermore, the complete virtualization of the IT network into the cloud bolsters security. For example, in a WaaS environment, employees can BYOD (Bring Your Own Device) onto the network without any hassle and if that employee leaves the company, their access to the cloud can simply be deactivated, drastically reducing the risk of data loss, systems-breach or malicious

use. The case for WaaS is quite clear, because it increases employee flexibility and company security. Over time, these combine to drive productivity and boost the bottom line, which is the core reason for any technology to reach popularity in the business community."

About Technolink Of The Rockies

Founded in 1983, Technolink of the Rockies is able to fulfill all of its customers' technology needs. The company is the premier resource for business phone systems (VoIP and Session Initiation Protocol (SIP) provisioning), Managed IT Services, Network Security, Video Conferencing and Disaster Recovery. Technolink of the Rockies has built a team of professional voice and data specialists whose goals are maximum customer satisfaction through total customer service. The company designs, implements and monitors end-to-end solutions.

Technolink of the Rockies delivers the future by linking business technologies today! For more information, please call 303-790-8700 or visit us at www.asktechnolink.com.
