VP of Sales

The Windows 10 Deadline is Approaching Fast - Are You Ready?

*Technolink of the Rockies Urges
Business Owners to Prepare for
October 14, 2025
and Avoid a Costly IT Crisis*

ENGLEWOOD, CO – June 26, 2025 - Technolink of the Rockies, a leading managed technology services provider (MTSP), is encouraging business owners to prepare now for the upcoming end-of-life for Windows 10. Small to mid-sized businesses (SMBs) that utilize Windows 10 to support their infrastructure will be affected by this on October 14, 2025, and businesses without a plan will be compromised. Starting on that date, Microsoft will officially discontinue all support for the operating system, meaning no more security updates, no feature enhancements, and no technical support. This means organizations will be exposed to security leaks, teams relying on obsolete tools and no ability for anyone to assist.

“If your organization is running Windows 10 after the deadline, you’re gambling with your security, performance, and productivity,” said Jeff O’Neill, VP of Sales at Technolink of the Rockies. While technology will still function, it will degrade on an accelerated schedule. First, security vulnerabilities will go

unpatched, leaving systems wide open to modern cyberattacks. Next, no technical support will be available from Microsoft. No feature or performance updates will be provided, and many organizations may find themselves unable to run critical software or interface with updated platforms, due to incompatibility issues.

“This is where a proactive technology provider like Technolink of the Rockies is invaluable,” said O’Neill. “We manage our customers’ technology 24x7 and help them plan for obsolescence, so they are always secure, supported, and productive. This helps avoid large capital expenditures and maintains productivity across teams and systems. If your current provider hasn’t already started talking to you about a Windows 10 transition, that’s a red flag.”

The biggest surprise for many Windows users is that much of the hardware (aka computers, laptops, servers, etc.) made more than 3-5 years ago will not meet the minimum system requirements for upgrading to Windows 11. This will force many organizations into large, unexpected capital expenditures, especially if they want to keep their teams busy.

“This isn’t just a software update. Most older desktops, laptops, and servers will simply not be compatible with Windows 11,” added O’Neill. “So, if you’ve been trying to stretch your hardware lifecycle just a little longer—you’re officially out of runway.”

The team at Technolink of the Rockies is helping businesses to plan for this transition by following a 4-Step Plan:

1. **Determine Windows 11 Compatibility for All Hardware:** Technolink of the Rockies strongly advises organizations to evaluate their current hardware to determine Windows 11 compatibility.
2. **Develop a roadmap for replacing outdated devices:** By taking the time to do this ahead of the deadline, organizations will seamlessly operate.
3. **Avoid DIY upgrades:** Organizations that forget to plan are often tempted to “do-it-yourself” upgrades, which can result in total data loss, system instability or voiding their cybersecurity insurance.
4. **Partner with Technolink of the Rockies:** We recommend you work with a certified managed technology services provider like Technolink of

the Rockies. The company is ISO 27001 Compliant. Only a handful of providers in the U.S. and Canada are compliant.

While Microsoft will make Windows 11 software freely available, upgrading isn't as simple as clicking a button. Technolink of the Rockies encourages all existing customers and local businesses to start evaluating their technology infrastructure immediately, rather than wait until the last minute when inventory and support resources may be scarce.

"If you're running on outdated machines and aging

servers, this is the moment to invest in your long-term efficiency," O'Neill concluded. "The older your hardware is, the slower, less secure, and more expensive it becomes to maintain. Let's use this deadline as an opportunity to upgrade wisely."

ABOUT TECHNOLINK OF THE ROCKIES

Founded in 1983, Technolink of the Rockies is able to fulfill all of its customers' technology needs. The company is the premier resource for business phone systems (VoIP and Session Initiation Protocol (SIP) provisioning), Managed IT

Services, Network Security, Video Conferencing and Disaster Recovery. Technolink of the Rockies has built a team of professional voice and data specialists whose goals are maximum customer satisfaction through total customer service. The company designs, implements and monitors end-to-end solutions.

Technolink of the Rockies delivers the future by linking business technologies today! For more information, please call 303-790-8700 or visit us at www.asktechnolink.com.
